```

```

harshitha@DESKTOP-7ADDEN8:~/first$ nano ps1.sh
harshitha@DESKTOP-7ADDEN8:~/first$ pstree -ef
pstree: invalid option -- 'e'
Usage: pstree [-acglpsStTuZ] [ -h | -H PID ] [ -n | -N type ]
           [ -A | -G | -U ] [ PID | USER ]
    or: pstree -V

```

Display a tree of processes.

```

-a, --arguments      show command line arguments
-A, --ascii          use ASCII line drawing characters
-c, --compact-not    don't compact identical subtrees
-C, --color=TYPE     color process by attribute
                     (age)
-g, --show-pgids     show process group ids; implies -c
-G, --vt100          use VT100 line drawing characters
-h, --highlight-all highlight current process and its ancestors
-H PID, --highlight-pid=PID
                     highlight this process and its ancestors
-l, --long           don't truncate long lines
-n, --numeric-sort   sort output by PID
-N TYPE, --ns-sort=TYPE
                     sort output by this namespace type
                     (cgroup, ipc, mnt, net, pid, time, user, uts)
-p, --show-pids      show PIDs; implies -c
-s, --show-parents   show parents of the selected process
-S, --ns-changes     show namespace transitions
-t, --thread-names   show full thread names
-T, --hide-threads   hide threads, show only processes
-u, --uid-changes    show uid transitions
-U, --unicode        use UTF-8 (Unicode) line drawing characters
-V, --version        display version information
-Z, --security-context
                     show security attributes

```

```

PID      start at this PID; default is 1 (init)
USER     show only trees rooted at processes of this user

```
